

Product Manufacturing and Construction Declaration

An instrumental component of low VOC emitting product certification and subsequently product line bracketing as performed in the **MAS Certified Green®** program is a thorough understanding and accounting for the various chemical compounds off-gassed from a given product. In general most of the off-gassed compounds measured during a compliance emission test correspond directly to the chemicals and their breakdown constituents contained in the raw materials and components that make up those products.

Based on this correlation, MAS must verify (as part of the re-certification process) that certain assumptions made based on prior test data are still valid and that manufacturing, raw material and vendor changes have not occurred which would could negatively impact the pending round of emissions testing and recertification.

By execution of this document, the “manufacturer” _____ certifies that to the best of his/her knowledge that there have been no changes within the past year in the raw material used*, the suppliers of those raw materials, nor changes made to the manufacturing process of the exemplar products submitted for this years low VOC product certification and bracketing.

**this includes paints, topcoat finishes, engineered wood substrates, adhesives, vinyl based polymers, foams and known VOC additives to a product formulation*

MANUFACTURER’S ACKNOWLEDGMENT

Exemplar Product(s) Submitted: _____

Bracketed Product(s) / Lines: _____

Dated this ___ day of _____, 20__

Signature: _____ Printed: _____

Representing: _____ Title: _____
