

MAS Certified Green – Recertification

Product Construction & Supplier Chain Questionnaire For Wood Based Furniture

Product Manufacturer: _____

Product Lines Included in Certification: _____

MAS needs a detailed understanding of the general construction of your products and the types of raw materials used in those products. As such, please provide answers to each of these questions: **Specifically identify the actual product name(s) and manufacturer(s) of each::**

1. Identify substrates used (particle board, plywood, solid wood, MDF) – Specifically identify which substrates are used in which lines?

2. Identify all top coat finishes used (polyurethanes, lacquers, UV solid, conversion varnishes, catalyzed finishes) and delineate water or oil based?

3. Identify of all plastic laminates used (medium, high pressure, melamine, etc.)?

MAS Certified Green – Recertification

4. Identify all backer sheets used including types (Kraft, phenolic, Gator-ply, etc. and specific applications)?

5. Identify types of construction adhesives used?

6. Identify types of edge banding used (PVC, vinyl T-mold, wood veneers, urethane armor coats, etc.)?

7. Identify paints used on wood and metal exposed surfaces (acrylic, oil, powder coat)?

8. Identify types of plastics used (nylon, polypropylene, ABS, lexan, etc.)? - Identify specific application and in which product lines?

From this information, MAS will be able to reconfirm certain bracketing assumptions so that we are able to certify as many products as possible with a limited number of tests (thus reducing the overall program costs). In addition, based on the provided information MAS will specify a “worst” case exemplar to submit for this year’s re-certification test(s).
